

**Beaches Facial Plastic &
Nasal Surgery Center**
Scott J. Trimas, M.D., FACS

General Information

Each year the number of individuals who undergo cosmetic surgery increases at an incredible rate. Cosmetic surgery can truly satisfy many needs. Primarily it provides an extra measure of inner confidence through improvement of one's appearance.

Most patients understand that there are limitations and view the potential benefit realistically. Excellent candidates for cosmetic surgery are those that are generally healthy, emotionally stable, and properly motivated. Under these circumstances, the true objective can be accomplished. A positive and realistic outlook yield final results that are predictably accurate and satisfying.

The decision to undergo any surgical procedure must be made by the patient alone. It is a decision that should not be undertaken solely at the suggestion or encouragement of others. Family and friends must provide support and understand that the patient's main goal is improvement in self-confidence.

The patient's specific desires will be given important consideration. However, the method of achievement requires professional judgment in evaluating functional and aesthetic goals within the anatomical limitations.

Contemplating any corrective surgery should not be approached with apprehension or fear. Do not be afraid to ask questions. Bring a family member, friend, and a list of questions to your appointments. My staff or myself are more than happy to answer any questions you may have. Also, thanks to advances in medicine and present methods of anesthesia, there's essentially no pain or discomfort during the operation. Postoperative pain is minimal and controlled with medication.

The clinical staff takes great pride in involving themselves throughout your treatment process. Their assistance is vital during examinations, pre-operative education, surgical procedures, and post-operative follow-up care. Personal attention is directed to all of the important details. Every effort is made to obtain the best possible result.

It is imperative that every patient plays a role in his or her own treatment with strict adherence to postoperative instructions. Achievement of the best result is a team effort involving the patient and the surgeon.
